

UtilitiesPhone Routing API Documentation

This document provides technical details for interacting with the **Routing API** located at:

```
POST https://utilitiesphone.com/routings/api.php
```

All requests must include an `action` parameter indicating which operation to perform.

Available Actions

1. add_connection

Creates a new routing connection.

Endpoint:

```
POST https://utilitiesphone.com/routings/api.php
```

Action: `add_connection`

Parameters

- **action** — must be `add_connection`
- **ip** — The IP address of the system
- **token** — Your API token
- **name** — A descriptive name for the connection
- **country** — Country code (e.g., `US`, `CA`, `UK`)

Example Response (JSON)

```
{  
  "success": true,  
  "connection_id": 42,  
  "message": "Connection successfully created"  
}
```

Notes

- All requests **must** be sent via POST.
- Responses are always returned in JSON format.
- This page is structured to allow adding additional actions in the future.
